FEBRUARY 2009**

February 26, 2009

J. Clark Kelso, Receiver
California Prison Health Care Receivership Corporation
501 J Street, Suite 100
Sacramento, California 95814

Dear Mr. Kelso:

Enclosed is the Office of the Inspector General's final report on its inspection of medical care delivery at R.J. Donovan Correctional Facility. Consistent with our agreement with the receiver, the purpose of our inspection was to evaluate and monitor the progress of medical care delivery to inmates at the institution.

The report finds that based on our weighted scoring system encompassing 18 components, the R.J. Donovan Correctional Facility received 68.0 percent of the total weighted points possible. The report contains a detailed breakdown of the institution's score in each of the 18 relevant categories, including the results of all 145 questions. A copy of the report can also be found on our website at www.oig.ca.gov.

Thank you for the courtesy and cooperation extended to my staff during the inspection. Please call Nancy Faszer, Deputy Inspector General, In-Charge, at (916) 830-3600 if you have any questions.

Sincerely,

A handwritten signature in blue ink that reads "David R. Shaw". The signature is fluid and cursive.

David R. Shaw
Inspector General

cc: Theresa Kimura-Yip, Associate Director, Support Operations Section, Plata Field Division
Liz Romero, M.D., Health Care Manager, R.J. Donovan Correctional Facility
Robert J. Hernandez, Warden, R.J. Donovan Correctional Facility
Matthew Cate, Secretary, California Department of Corrections and Rehabilitation

Executive Summary

An April 2001 class action lawsuit filed by inmates represented by the Prison Law Office alleged that the state provided constitutionally inadequate medical care at California state prisons in violation of inmates’ constitutional rights. And, in October 2005, the U.S. Northern District Court of California declared that California’s delivery system for prison medical care was “broken beyond repair” and still not meeting constitutional standards. As a result, the federal court imposed a receivership to raise the delivery of medical care to constitutional standards. To evaluate and monitor the progress of medical care delivery to inmates, the receiver requested, and the Office of the Inspector General (OIG) agreed, to establish an objective, clinically appropriate, and metric-oriented medical program to annually inspect the delivery of medical care at each state prison.

<p>Overall Score</p> <p>68.0%</p>

In November 2008, we inspected the R.J. Donovan Correctional Facility (RJD). Our medical inspection encompassed 18 components of medical delivery and comprised 145 questions. The questions are weighted based on their importance to the delivery of medical care to inmates. RJD received 68.0 percent of the total weighted points possible.

The following summary table lists the components we inspected in order of importance (highest to lowest), with the institution’s score and the definitions of each inspection component. The detailed medical inspection results, with the questions for each component, begin on page 7 of this report. While we are committed to helping each institution achieve a higher level of medical care, it is not our intent to determine the percentage score needed by an institution to meet constitutional standards—that is a legal matter for the federal court to determine.

Executive Summary Table

Component	Weighted Score	Definition
<i>Chronic Care</i>	48.8%	Examines how well the prison provided care and medication to inmates with specific chronic care conditions, which are those that affect (or have the potential to affect) an inmate’s functioning and long-term prognosis for more than six months. Our inspection tests the following chronic care conditions: asthma, Coumadin therapy, diabetes, HIV (Human Immunodeficiency Virus), and hypertension.
<i>Clinical Services</i>	67.2%	Evaluates the inmate’s access to primary health care services and focuses on inmates who recently received services from any of the prison’s facility or administrative segregation unit clinics. This component evaluates sick call processes (doctor or nurse line), medication management, and nursing.
<i>Health Screening</i>	68.0%	Focuses on the prison’s process for screening new inmates upon arrival to the institution for health care conditions that require treatment and monitoring, as well as ensuring inmates’ continuity of care.
<i>Specialty Services</i>	62.3%	Focuses on the prison’s process for approving, denying, and scheduling services that are outside the specialties of the prison’s medical staff. Common examples of these services include physical therapy, oncology services, podiatry consultations, and neurology services.
<i>Urgent Services</i>	73.2%	Addresses the care provided by the institution to inmates before and after they were sent to a community hospital.

Component	Weighted Score	Definition
<i>Emergency Services</i>	89.7%	Examines how well the prison responded to medical emergencies. Specifically, we focused on “man down” or “woman down” situations. Further, questions determine the adequacy of medical and staff response to a “man down” or “woman down” emergency drill.
<i>Prenatal Care/Childbirth/Post-delivery</i>	N/A	Focuses on the prenatal and post-delivery medical care provided to pregnant inmates. Not applicable at men’s institutions.
<i>Diagnostic Services</i>	64.0%	Addresses the timeliness of radiology (x-ray) and laboratory services and whether the prison followed up on clinically significant results.
<i>Access to Health Care Information</i>	44.1%	Addresses the prison’s effectiveness in filing, storing, and retrieving medical records and medical-related information.
<i>Outpatient Housing Unit</i>	N/A	Determines whether the prison followed department policies and procedures when placing inmates in the outpatient housing unit. This component also evaluates whether the placement provided the inmate with adequate care and whether the physician’s plan addressed the placement diagnosis.
<i>Internal Reviews</i>	100.0%	Focuses on the frequency of meetings held by the prison’s Quality Management Committee (QMC) and Emergency Response Review Committee (ERRC) and whether key staff attended the meetings, the number of medical appeals filed, and the prison’s death review process.
<i>Inmate Transfers</i>	89.5%	Focuses on inmates pending transfer to determine whether the sending institution documented medication and medical conditions to assist the receiving institution in providing continuity of care.
<i>Clinic Operations</i>	94.9%	Addresses the general operational aspects of the prison’s facility clinics. Generally, the questions in this component relate to the overall cleanliness of the clinics, privacy afforded to inmates during nonemergency visits, use of priority ducats (slip of paper the inmate carries for scheduled medical appointments), and availability of health care request forms.
<i>Preventive Services</i>	24.0%	Focuses on inmate cancer screening and influenza immunizations.
<i>Pharmacy Services</i>	93.3%	Addresses whether the prison’s pharmacy complies with various operational policies, such as conducting periodic inventory counts and maintaining the currency of medications in its night lockers, keeping signature cards on file for doctors, and having valid permits. In addition, this component also addresses whether the pharmacy has an effective process for screening medication orders for potential adverse reactions/interactions.
<i>Other Services</i>	100.0%	Examines additional areas that are not captured in the other components. The areas evaluated in this component include the prison’s provision of therapeutic diets, its handling of inmates who display poor hygiene, and the availability of the current version of the department’s Health Services Policies and Procedures.
<i>Inmate Hunger Strikes</i>	10.5%	Examines medical staff’s monitoring of inmates participating in hunger strikes.
<i>Chemical Agent Contraindications</i>	94.1%	Addresses the prison’s process of handling inmates who may be predisposed to an adverse outcome from calculated uses of force (cell extractions) involving Oleoresin Capsicum (OC), which is commonly referred to as “pepper spray.” For example, this might occur if the inmate has asthma.
<i>Staffing Levels and Training</i>	100.0%	Examines the prison’s medical staffing levels and training provided.
<i>Nursing Policy</i>	88.6%	Determines whether the prison maintains written policies and procedures for the safe and effective provision of quality nursing care. The questions in this component also determine whether nursing staff review their duty statements and whether supervisors periodically review the work of nurses to ensure they properly follow established nursing protocols.
Overall Score	68.0%	

Introduction

Under the authority of California Penal Code section 6126, which assigns the Office of the Inspector General (OIG) responsibility for oversight of the California Department of Corrections and Rehabilitation, and at the request of the federal receiver, the OIG developed a comprehensive inspection program to evaluate the delivery of medical care at each of the California Department of Corrections and Rehabilitation's 33 adult prisons.

In November 2008, we inspected the R.J. Donovan Correctional Facility (RJD). Our medical inspection encompassed 18 components of medical delivery and comprised 145 questions. To help readers understand the medical risk associated with certain components of medical delivery—which pose a greater risk to an inmate-patient—we developed a weighting system and assigned points to each question. Consequently, we assigned more total points to more critical components, such as chronic care, clinical services, and health screening. We assigned fewer total points to less critical components, such as inmate hunger strikes, staffing levels and training, and chemical agent contraindications. (For a detailed description of the weighting system, see Objectives, Scope, and Methodology on the next page.)

Background

In April 2001, inmates represented by the Prison Law Office filed a class action lawsuit, known as *Plata v. Schwarzenegger*. The lawsuit alleged that the state provided constitutionally inadequate medical care at California state prisons in violation of inmates' constitutional rights. In June 2002, the parties entered into a Stipulation for Injunctive Relief, and the state agreed to implement over several years comprehensive new medical care policies and procedures at all institutions.

Nevertheless, the U.S. Northern District Court of California declared in October 2005 that California's delivery system for prison medical care was "broken beyond repair" and still not meeting constitutional standards. Thus, the federal court imposed a receivership to raise the delivery of medical care to constitutional standards. In essence, the court ordered the receiver to manage the state's delivery of medical care and restructure day-to-day operations to develop and sustain a system that provides constitutionally adequate medical care to inmates. The court stated that it would remove the receiver and return control to the state once the system is stable and provides for constitutionally adequate medical care.

To evaluate and monitor the progress of medical care delivery to inmates, the receiver requested that the OIG establish an objective, clinically appropriate, and metric-oriented medical inspection program. Toward that end, the Inspector General agreed to inspect annually each state prison until the state's delivery of medical care to inmates meets constitutional standards. We are committed to helping each institution achieve a higher level of medical care, but it is up to the federal court to determine the percentage score necessary for an institution to meet constitutional standards.

About the Institution

The primary mission of RJD is to provide housing and supervision for inmates classified as medium to high custody. The institution includes a minimum support facility, two reception center facilities, one level III general population facility, and one level IV sensitive needs yard. Designed as a training and work-oriented facility, RJD provides comprehensive vocational, academic and industrial programs. Along with five clinics that handle non-urgent requests for medical services, RJD treats inmates needing urgent or emergency care in its triage and treatment area (TTA). Further, the institution has a state-licensed correctional treatment center. As of November 12, 2008, the California Department of Corrections and Rehabilitation reported that RJD housed 4,766 male inmates.

Elizabeth Romero, M.D., who serves as the prison's chief medical officer and health care manager, is responsible for RJD's entire health care program.

Objectives, Scope, and Methodology

In designing the medical inspection program, we reviewed the California Department of Corrections and Rehabilitation's policies and procedures, relevant court orders, guidelines developed by the department's Quality Medical Assurance Team, and guidance developed by the American Correctional Association. We also reviewed professional literature on correctional medical care, consulted with clinical experts, and met with stakeholders from the court, the receiver's office, the department, and the Prison Law Office to discuss the nature and scope of the inspection program. Based on input from these stakeholders, we developed a medical inspection program that evaluates medical care delivery. Within each of 20 components, we created "yes" or "no" questions designed to gauge performance.

To make the inspection results meaningful to both a medical expert and a lay reader, we worked with clinical experts to create a weighting system that factors the relative importance of each component compared to other components. Further, the program considers the relative importance of each question within a component to the other questions in that component. This weighting ensures that more critical components—such as those that pose the greatest medical risk to the inmate-patient—are given more weight compared to those considered less serious. For example, we assign a high number of possible points to the chronic care component because we consider this the most serious of all the components. Conversely, we assign very few points to the hygiene intervention component because we consider this the least serious inspection component.

Each inspection question is weighted and scored. The score is derived from the percentage of "yes" answers for each question from all items sampled. We then multiply the percentage of "yes" answers within a given question by the question's weight to arrive at a score. The following example shows how this scoring system works.

<i>Example Question: Institution X</i>								
	<i>Answers</i>				<i>Weighting Points</i>		<i>N/A</i>	<i>Unk</i>
	<i>Yes</i>	<i>No</i>	<i>Yes + No</i>	<i>Yes %</i>	<i>Possible</i>	<i>Received</i>		
Is the clinical history adequate?	40	10	50	80%	20	16	0	0

If the institution receives 40 “yes” answers and 10 “no” answers, the percentage of “yes” answers to this question equals 80 percent. We calculate the number of points the institution would receive by multiplying the “yes” percent of 80 by the number of possible points for this question, which is 20, to arrive at 16 points.

To arrive at the total score, we add the points received for each question and then for each program component. Finally, we calculate the institution’s overall score by dividing the sum of the points received by the sum of the points possible. We do not include in the institution’s overall score the weight for questions that are not applicable or, in some cases, where a lack of documentation would result in numerous “no” answers for one deviation from policy (unknown). For instance, an institution may not be able to provide documentation that its emergency response review committee met for a particular month. Therefore, when we evaluate whether meeting minutes document monthly meetings for a particular month, the institution would receive a “no” answer for that question. However, when we evaluate whether the meeting minutes document the warden’s attendance at the meeting, the answer would be “unknown” so that the institution’s score is not penalized twice for the same reason, not documenting the meeting.

To evaluate the institution’s delivery of medical care, we obtained various electronic data files maintained by the institution for inmate medical scheduling and tracking, pharmacy, and census data. We used these electronic data files only to identify random samples of inmates receiving or requiring specific medical services. We then reviewed the medical file for each inmate in our sample. We did not rely on the medical care information contained in these data files.

In total, we reviewed 186 inmate medical files, which are referred to as unit health records. In addition, we reviewed staffing level reports, medical appeals summaries, nursing protocols, summaries of medical drills and emergencies, minutes from Quality Management Committee and Emergency Response Review Committee hearings, and assorted manual logs or tracking worksheets related to medical care delivery. We also conducted a live medical emergency drill and evaluated the adequacy of the responding staff’s actions. Finally, we interviewed medical and custody staff members about the delivery of medical care to inmates, and we observed day-to-day medical delivery at the institution.

We do not test the care provided in the licensed hospitals or correctional treatment centers because they are subject to inspections and oversight by other regulatory agencies.

Consistent with our agreement with the receiver, our report only addresses the conditions found related to the medical care criteria. We do not discuss the causes of noncompliance, nor do we make specific recommendations in this report. However, if we learn of an inmate-patient who needs immediate care, we notify the chief medical officer and request a status report. Moreover, if we learn of significant departures from community standards, we may report such departures

to the institution's chief medical officer or quality management committee. Because these matters involve confidential medical information protected by state and federal privacy laws, specific details related to these cases are not included in our report.

For ease of reference, following is a table of abbreviations used in the remainder of this report.

Abbreviations used in this report	
AED	Automatic External Defibrillator
BLS	Basic Life Support
CMO	Chief Medical Officer
CTC	Correctional Treatment Center
CTQ	Confined to Quarters
ERRC	Emergency Response Review Committee
FTF	Face-to-Face
GACH	General Acute Care Hospital
HCM	Health Care Manager
INH	Isoniazid (antituberculous medication)
LVN	Licensed Vocational Nurse
MOD	Medical Officer of the Day
OB	Obstetrician
OC	Oleoresin Capsicum (pepper spray)
OHU	Outpatient Housing Unit
OIG	Office of the Inspector General
PCP	Primary Care Provider
QMC	Quality Management Committee
RN	Registered Nurse
SOAPE	Subjective, Objective, Assessment, Plan, Education
SRN	Supervising Registered Nurse
TB	Tuberculosis
TTA	Triage and Treatment Area
UHR	Unit Health Record
UM	Utilization Management

California Prison Health Care Receivership Corporation's Response

**CALIFORNIA
PRISON HEALTH CARE
RECEIVERSHIP CORP.**

J. Clark Kelso
Receiver

February 4, 2009

David R. Shaw, Inspector General
Office of the Inspector General
P.O. Box 348780
Sacramento, CA 95834-8780

Dear Mr. Shaw,

The purpose of this letter is to inform you that the Office of the Receiver has received and reviewed the draft report of the Office of the Inspector General's (OIG) Medical Inspection Results (MIR) for the November 2008 inspection of the Richard J. Donovan (RJD) Correctional Facility. In addition, the January 26, 2009 revised draft report summary and draft report details have also been reviewed. At this time we would like to address the following conditions raised as a result of the MIR and recent revision.

Chronic Care – Reference Number 03.077

According to the OIG MIR, key elements on Forms 7419 Chronic Care Follow-Up Visit and 7392 Primary Care Flow Sheet were not filled out completely. RJD is currently one of the six original institutions participating in the asthma initiative. As part of the initiative, RJD has revised the chronic care form, using instead a new "Intake/Chronic Care Asthma Visit" form. While this new form does not have some of the questions on the "Chronic Care Follow-up Visit" form, such as the number of short acting beta agonist canisters used in the past month, it contains other questions which would assist in the determination of not only the degree of control of asthma, but also the severity, so that a more comprehensive treatment plan can be formulated.

Preventive Services – Reference Numbers 10.085

According to the OIG MIR, an inmate's refusal to receive a Fecal Occult Blood Test (FOBT) within the previous 12 months must be documented on Form 7362 (Primary Care Flow Chart). Initiating screening at 50 years of age for men and women at average risk of colorectal cancer is based on the incidence of cancer above this age in the general population. In persons at higher risk (for example, those with a first-degree relative who receives a diagnosis with colorectal cancer before 60 years of age), initiating screening at an earlier age is reasonable. Based on best practices, the Chief Medical Officer recommends utilizing other potential screening option alternatives for colorectal screening.

David R. Shaw, Inspector General

Tim Rougeux, Chief Operating Officer, Medical Services
Liz Romero, M.D., Health Care Manager, R.J. Donovan Correctional Facility
Theresa Kimura-Yip, Associate Director, Policy and Field Operations
Olga Durette, Health Program Manager II, Policy and Field Operations

Office of the Inspector General's Comments on the Receiver's Response

Chronic Care – Reference Number 03.077

The OIG reviews forms for key elements, as determined by policy or by our clinical experts. If a provider used a previous version of the form, a different form, or a progress note, our reviewers still look for those key elements and will answer "Yes" to the question if the key elements are included, regardless of the form the provider used. For the two "No" answers the institution received for asthma patients for question 03.077, the OIG found that documentation of the visits lacked key elements the department requires for inmates with chronic medical conditions, such as the inmate's breathing capacity or a time frame for the inmate's next appointment.

Preventive Services – Reference Numbers 10.085

The OIG looks for an inmate's refusal on multiple forms in multiple areas of the health record, not just on Form 7392. Therefore, if an inmate's refusal of a fecal occult blood test is documented on another form, the institution receives a "yes" answer for this test. Further, the department's policy requires that all inmates 50 years of age or older must receive annual fecal occult blood tests. All OIG tests were reviewed and agreed to by the receiver's office and plaintiff's counsel during the development phase of this program. The OIG believes that it would be inappropriate to test the institution based on practices not required by the department's medical policy. In this inspection, the OIG found that 7 of the 10 inmates we tested had not received a fecal occult blood test within the 12 months prior to our inspection as required by policy. Therefore, our answers are unchanged.
